Cure Clubfoot
for just \$200!

Cure International - Cure Clubfoot

Kenya - Africa

"Clubfoot effects 1 in 750 children worldwide. In Africa most children never receive treatment, for just \$200 a child can walk for the rest of their life!"

Clubfoot is a condition that is easily treatable at birth. Unfortunately, more than 200,000 babies will be born with clubfeet this year in the developing world and will not receive the treatment they need. With your help and just \$200, we can cure clubfoot and make sure that many disabled children get the cure they need before surgery is their only option. If caught before a child is 2 years old, we can treat

clubfoot with a series of casts -- avoiding surgery and the pain of growing up with crooked feet. We hope to expand this program into 100 countries over the next ten years and you can help us eradicate clubfoot from the planet!
